Cleanliness is always in season
The best-kept hotels in town

Sustainable hygiene management is now a standard practice in the hotel and restaurant business. It improves the wellbeing of guests and reflects the self-image of the business. In addition, professional maintenance extends the service life of the facilities. Cost-conscious managers invest in Kärcher cleaning systems because they are economical, easy to use and very durable.

Welcome your guests with class and style

All over the world the Kärcher name stands for power, quality and innovation, and for cleaning expertise that sets the standard. For the hospitality industry, the Kärcher system offers outstanding solutions for every need and requirement, with perfectly coordinated equipment and accessories. They feature high performance, efficiency and cost effectiveness thanks to innovative technology, low consumption and long service life – and they are pleasantly inconspicuous.
1. The highest standard of cleanliness
The Kärcher microfibre roller is a state-of-the-art accessory. Unbeatable on fine stoneware tiles, it achieves exceptionally good results on all smooth or lightly textured floors.

2. EASY Operation – the Ergonomic Application System
Kärcher’s EASY Operation concept provides a uniform operating system with self-explanatory graphic symbols to prevent potential operator errors. This enhances safety and productivity and extends the service life of the machine. The symbols and settings are the same for all sweepers and scrubber driers. Once these symbols are learned, operating every EASY Operation machine is intuitive. EASY Operation is already standard with many current Kärcher machines.

3. Low equipment noise
Thanks to soundproofed motors and optimised air flow, the noise level of the T 15/1 vacuum (for example) has been reduced to a whisper-quiet 59 dB(A). This allows the machine to be used in noise-sensitive areas or during normal business operation.

4. An outstanding combination of form and function
Kärcher machines have repeatedly won awards for the successful combination of form and function, such as the Red Dot Design Award and the iF Product Design Award.
Ready to receive guests in style

The first impression is what counts. This is especially true in the hotel and restaurant business. As soon as your guests enter the hotel or the reception area, they should see and feel that cleanliness is a top priority. Leading hospitality businesses rely on the world market leader Kärcher for this. With everything from floor scrubbers for the foyer to extremely quiet vacuums for the lobby, Kärcher has the right cleaning system for every purpose.
1. **Cost effective and technically brilliant**  
Scrubber driers make floors hygienically clean and give them a brilliant shine. With its high surface pressure, roller brush technology is advantageous for textured or jointed surfaces. Machines with proven disc technology are suitable for smooth surfaces.

2. **Just spray and vacuum for a clean carpet**  
Ideal for heavily soiled carpeting: spray-extraction cleaners loosen and remove dirt in a single operation. The spray-extraction function of the Puzzi series is ideal for heavy traffic areas which must be quickly restored to dry, accessible condition.

3. **Top marks for low noise**  
With a noise level of only 59 dB(A), the T 15/1 is the quietest vacuum in its class. This makes it ideal for all noise-sensitive areas. It also protects users against noise exposure, which makes their work more comfortable and less stressful.

4. **Torque conquers dirt**  
Kärcher polishing machines, such as the compact BDP 51/1500 C, generate high torque to produce an especially high-gloss surface.

5. **Retire your broom and dustpan**  
The EB 30/1 cordless sweeper is handy in the entrance area for cleaning up minor dirt at the source. It quickly and easily picks up loose dirt from hard surfaces and carpeting. What is more, it is readily available when you need it and can be set aside inconspicuously just as easily.
Only the best is good enough.

Guests come first. And guests want things clean and quiet – always and everywhere. Cleaning systems for indoor areas must therefore have special characteristics: They must be quiet, easy to transport, and ergonomically designed, and they must be suitable for use in confined spaces. These characteristics also make the machines easier to use and more pleasant.

Top-class maintenance
Whisper-quiet dry vacuums, such as the T15/1, for daily maintenance cleaning.

Extensive and thorough
Dual-motor brush-type vacuum cleaners with generous working widths clean large areas quickly.

For your XXL carpeting
Automatic carpet cleaners for thorough, deep carpet cleaning.

Endless steam
Kärcher steam cleaner with two-tank system for continuous operation without a cool-down break.

For other equipment and accessories visit www.karcher.ca
1 Tip-top carpet appearance
Brush-type vacuum cleaners such as the CV 38/2 combine vacuum action with an electrically driven brush. This causes the carpet fibres to stand up and make room, so the vacuum can reach the dirt particles. The indicator lamp shows the user when the roller brush setting should be changed to obtain the best cleaning results.

2 Tough on dirt, easy on furniture
Small portable vacuums such as the T 12/1 are specifically designed for the daily cleaning of relative small rooms, with convenient foot control, an impact-resistant container and wrap-around bumpers to protect the furniture.

3 Brushing the easy way
The CV 71/2 brush-type vacuum cleaner for large carpet areas is highly effective and economical, as well as enormously user friendly. It features compact construction, high manoeuvrability, an height-adjustable handle and space-saving storage thanks to its folding design.

4 The classic solution for edges and corners
This manual suction tube reaches all the places the brush can not reach.

5 Take large areas in stride
Automatic carpet cleaners in the BRC series combine spray extraction with the mechanical action of roller brushes. They are ideal for wet interim cleaning and basic cleaning of large areas.

6 The upholstery master
Puzzi spray-extraction cleaners excel in upholstery cleaning with unbeatable extraction performance for extremely short drying times.

7 Remove lime and dirt without chemicals
The DE 4002 steam cleaner loosens stubborn lime and dirt in bathrooms without cleaning agents, and its ingenious two-tank system eliminates waiting times for water heating. The VapoHydro function allows the spray to be adjusted continuously from hot water to steam.

8 Tackle difficult vacuuming jobs
With its ergonomically refined belt system, the BV 11/1 can be carried comfortably on the user’s back – an invaluable relief for vacuuming in difficult areas such as staircases or narrow rows of seats.
Pure relaxation

Relaxation and hygiene are the top priority in pool and sauna areas. Without any compromise. Kärcher cleaning systems for wellness areas are able to do exactly what is needed there: remove coarse and fine dirt, dissolve lime, and disinfect. As a result, these areas not only look clean, but are also hygienically impeccable.

Big in small places
Compact scrubber driers deliver top performances in small places – in spas as well as fitness rooms.

1 Fast touch-up mopping
The BR 30/4 C is your first choice for maintaining floor hygiene in sensitive areas such as barefoot areas. You can spray, brush and vacuum in a single operation or separately. Lightning fast and spotless, and clinically clean with a disinfecting cleaning agent.

2 Tops in surface cleaning
Surface cleaners such as the FR 30 deliver ten times more area cleaning performance – an indispensable economic advantage for everyone who needs to clean fitness areas with large floor surfaces.

3 Environmentally friendly hygiene
The DE 4002 steam cleaner provides impeccable hygiene in saunas without using any cleaning agents. A plus for guests and the environment.

4 A multitalent for floors
The BR 40/10 C scrubber drier combines many features in a single unit: It scrubs like a single-disc machine, picks up cleaning solution like a wet vacuum, and polishes like a high-speed machine. Thanks to the positioning of its two suction bars, it can vacuum especially close to the edge. In addition, the squeegees pick up cleaning solution in both directions of travel – forwards and backwards.
Cleaning according to the house rules

The kitchen is vitally important for the reputation of a restaurant operation. For official reasons as well, there is no room for doubt that kitchen and restaurant hygiene is the top priority. The Kärcher system offers all the machines and accessories necessary to maintain surfaces, ovens and floors in appetizingly clean condition.

A quick sweep
Handy cordless cleaners such as electric brooms and sweepers are always close to hand and always useful.

Versatile all-rounder
Compact mobile scrubbing machines such as the BR 40/1000 C for basic and interim cleaning of all hard surfaces.

High pressure in the kitchen
Special high-pressure cleaners with components approved for use with foodstuffs deliver uncompromising hygiene.

For other equipment and accessories visit www.karcher.ca
1 Save time the easy way
The compact BR 30/4 C scrubber drier cleans all hard surfaces and is just as easy to use as a vacuum cleaner. Its low-profile brush head reaches under furniture and shelves, and it cleans both forwards and backwards.

2 The lowest profile in its class
The BRS 40/1000 C scrubber is an all-round machine for all hard surfaces. Thanks to its extremely low-profile construction, it can also reach under shelves – an important factor for kitchen hygiene.

3 Putting on the pressure
It takes the concentrated force of a hot-water jet or steam jet to remove stubborn baked-on dirt. Tackle the job with Kärcher accessories for steam cleaners, including the detail nozzle, brass bristle brushes, and a cleaning cloth set.
Outdoor facilities – your calling card at the entrance

The anticipation of a good meal or a fitness oriented weekend reaches its climax immediately before the entrance. This expectation can be further enhanced by a well maintained outdoor area. This advantage should be exploited to the full: in the car park as well as the entrance area, and in the underground car park, walkways and pool area.

Absolutely indispensable
High-pressure cleaners are indispensable in many areas, including façade cleaning, vehicle maintenance and floor or surface cleaning.

Swift brooms
Compact push and walk behind sweepers complete sweeping tasks in a fraction of the usual time and are considerably more cost effective than a normal broom.

Ready for big jobs
Ride-on scrubber driers for extremely severe conditions and long working hours. Your first choice for underground and above-ground car parks, as well as loading areas.

For other equipment and accessories visit www.karcher.ca
1 Progress made easy
The Kärcher KM 100/100 R Bp is a compact ride-on sweeper that combines superior ease of use with high area performance and effective automatic filter cleaning. The adjustable seat position, tilting steering wheel and oversized wheels underline its aim to fulfill contemporary expectations for ease of use.

2 Can we make that easier?
The compact and extremely manoeuvrable KM 75/40 W makes child’s play of thorough cleaning of small to medium-sized surfaces. Traction drive replaces brute strength, while delivering cleanliness without a cloud of dust. Available with an antistatic carpet sweeping kit as an option.

3 High-pressure surface cleaning
The FR 30 surface cleaner masterfully transforms the power of a Kärcher high-pressure cleaner into surface cleaning performance. The version with a plastic housing is especially easy to use, both outdoors and indoors.

4 Right on track
With their large surfaces, coarse and stubborn dirt and steep ramps, multi-level car parks often impose special demands on scrubber driers. The Kärcher BR 100/250 R Bp is ideally suited to the task, with its robust steel frame for use under severe conditions on surfaces with slopes up to 15%. The large water tank and powerful battery enable long periods of continuous operation.

Eco efficiency: so important because the future is infinite

In our quest for sustainability, the way is the goal. The way to the future, which Kärcher has followed for decades with exemplary consistency. Sustainability for Kärcher is based in equal part on the pillars of economy, social responsibility and environmental protection. A sound financial situation and appropriate earnings achieved in fair dealings with others, along with the responsible use of resources. This is how Kärcher embraces sustainability as one of its corporate goals: conducting business fairly with a sense of responsibility for people and the environment.

Use energy efficiently

The best form of energy is energy you don’t consume. Kärcher is constantly reducing its primary energy consumption. We employ various heat recovery systems with high operating efficiency; for example, waste heat from the plastic injection moulding plant heats an adjacent production building. Annual savings: 19,000 litres of fuel oil and 51,300 kg of CO₂.

Increase effectiveness

Use less to achieve the same result – or even more. The options are as diverse as Kärcher products. Kärcher steam cleaners work without polluting chemicals. Innovative nonwoven materials improve cleaning performance to the point that cleaning agents are unnecessary in most cases. Where they are necessary, cleaning agent usage can be substantially reduced by innovative dosing systems. Numerous other technical devices for improving efficiency can significantly reduce energy and cleaning agent consumption by up to 30% or more, depending on the application.
Concentrate on the essentials

Concentrating on the essentials includes the art of achieving more with less. Because less can be more. For example, when machines achieve more with fewer components. Fewer components means lower material usage, lower weight, lower energy consumption and therefore lower environmental impact. Kärcher has for many years followed the principle of using as few components as possible. Current Kärcher products have 20% fewer components on average than comparable products of other manufacturers, despite technical refinements such as cleaning agent dosing, filter cleaning and soot filters.

Use your own energy sources

The future belongs to renewable energy. At Kärcher, the future is already here. Two 30 kWp solar power plants generate around 33,000 kWh annually. A geothermal system uses geothermal energy for heating in winter and cooling in summer. Energy savings: 88%. Our wood chip heating plant alone saves 340,000 litres of fuel oil and over 1 million kg of CO₂ annually.
Enthusiasm, Innovation, Success

Since its beginnings more than 75 years ago, as a value-oriented family business Kärcher has developed into a world brand with three strong attributes: top performance, innovation and quality. Today, the Kärcher brand enjoys the reputation of being a global leader and resource-conserving supplier of professional cleaning systems and is characterised by reliable products, optimal user value and ongoing commitment to the environment, culture and sport.

1  Seattle’s highest building: the Space Needle
A Kärcher team pressure washed the structure all the way to the top, 184 metres above ground level. The job took eight weeks, working only at night.

2  A facelift for the heads of state
Clean again: in 2005 Kärcher cleaned the Mount Rushmore National Memorial and restored it to its original glory.

3  Innovative right from the start
In 1950, Kärcher developed the first hot water high-pressure cleaner for professional cleaning.
Clean environment
Kärcher works on environmental protection every day, with new products, technologies and investments in production facilities.

In-house research and development
Kärcher develops high-performance cleaning systems composed of cleaners, accessories and specifically coordinated cleaning and maintenance products.

International orientation
We are there for our customers in over 190 countries.

Commitment to sports
Clean performance on the pitch. For several years, Kärcher has supported German and international football as a partner.
