

FEATURING:

Catalytic Mufflers

by Nett Technologies

Nett® catalytic mufflers present a cost-effective solution to the problem of CO, HC and NO_x reduction in LPG, CNG and Gasoline powered engines in material handling, construction and gen-set applications.

Several advantages of Nett® mufflers make them the superior choice for most LPG engines:

High Reduction of Toxic Gases

- carbon monoxide is typically reduced by over 95%
- hydrocarbons are reduced by 70-90%
- characteristic smell of propane exhaust is virtually eliminated

Excellent Noise Attenuation

- Nett® catalytic mufflers match or surpass the noise attenuation performance of the original silencer

Long Life and Durability

- mufflers are built entirely from corrosion resistant materials

Direct-Fit Designs

- exact-fit replacement for the original muffler
- installation time and cost are reduced to a minimum

Also available for Diesel Engines

Similar to the catalytic mufflers for LPG engines, except a special type of catalyst is used. The diesel oxidation catalyst performs without any special engine controls or extra oxygen supply. **It effectively controls carbon monoxide, hydrocarbons, and diesel odor.** Diesel particulates may be reduced by up to 50%, depending on the engine and type of diesel fuel.
