

GARAGE PARTS & SERVICE STORAGE

The Challenge

Automotive Garages, Transportation Facilities and Parts & Service Departments require storage of both large, small and irregular shaped parts to work efficiently and effectively. Many locations have limited space, and expanding the work and storage area can be costly. Maximizing storage on-site with a minimal footprint and ensuring the workspace is clean and organized is very important.

The Solution

Rousseau provides a variety of standard and specialty shelving, drawers, cabinets, mini racking, workstations, mezzanines and more, exclusively for the Automotive Industry. Rousseau shelving, available in a variety of sizes and colours, allows for storage of popular automotive specific products of different dimensions and capacities. Create a customized Global Technician Workcentre with tech caddies, waste containers, louvered panels, power feed panels, lift motor controls, computer system integration, reels, and more. Shelving systems can accommodate mouldings, bumpers, exhaust pipes, tires, etc. Rousseau drawers are ideal for storage of small parts and high-turnover items. The solution can result in increased sales because of more stock that is easily accessible, uninterrupted workflow and companies can avoid the need to expand the departments.

Contact Equipment World for a complimentary workplace storage efficiency assessment.
