

## Living Walls

### Versa Wall

The Versa Wall® is a premier interior green wall system, known for its design flexibility, easy installation, and low maintenance. Its patented modular trays, available in various lengths, allow for custom configurations, including 90-degree corners and intricate designs around doors and windows. Each 4" plant receives individual water, making it water-efficient and reducing the need for constant watering. The system eliminates repotting, enabling easy, cost-effective plant replacement and seasonal updates.

### Versa Wall XT

The Versa Wall XT® is designed for green wall applications in tropical and northern climates, offering simple installation and easy maintenance. Utilizing hearty, 1-gallon, individually potted plants, it significantly reduces the time from installation to completion compared to pre-planted systems. As the most water-efficient system on the market, its irrigation delivers the precise amount of water to each plant, eliminating wasteful watering. The design flexibility allows for custom sizing, featuring trimless corners and sections of varying dimensions to meet your project needs.

### Versa Wall XT

The Pro Wall® system, GSky's first and most robust design, was launched in 2004. It features customizable 1-foot square panels, each housing 12 plants in a rockwool growth medium for optimal water retention and distribution. With 12 plants per square foot, the Pro Wall® offers unparalleled design flexibility and detail. Its water-efficient drip irrigation system is zoned for optimal performance, ensuring consistent plant health and continuity.
