

Wire Shelving

Whether you own a restaurant or retail store or manage a laboratory or hospital wing, wire shelving allows for unlimited storage possibilities and can fit any need. Open wire shelving is the most common type of metal shelving and provides an open aesthetic, so you can see everything you need at a glance. Because of the sparse elements it requires for strength and durability, you're always saving space with wire shelving. It's also customizable. Change the shelf heights at your will, or add more shelves where you need them. Wire shelves are extremely strong and can hold a large number of items without budging. Use wire shelving to store papers and goods in your commercial setting or large and heavy packages, industrial equipment, and more.
