

Rack Protection

Prevent costly downtime and collision damage with our comprehensive rack protection products. Constructed from all-steel, these products provide continuous protection for your racking systems, ensuring the safety of both your inventory and workers. Ideal for safeguarding rack posts, aisle ends, and inventory areas, these compact and space-efficient solutions are perfect for high-density storage applications. Protect your critical rack supports and prevent dangerous pallet spills while maintaining efficient aisle flow.

Rack Post Protectors

Rack posts are critical to any racking system but highly vulnerable to damage, especially from forklifts. A single damaged post can compromise the entire structure, leading to costly repairs and downtime. Our easy-to-install Cogan rack post protectors provide full, wraparound protection, ensuring your racking stays intact and your operations run smoothly. Made from durable steel with a powder-coated yellow finish for visibility, they come in three standard sizes, with custom options available to fit your needs.

Floor Angle Guide

Cogan floor angle guide offers low-to-the-ground, continuous protection to keep traffic away from key areas like rack supports, pallet flow rails, and narrow aisles. It helps prevent forklifts and order pickers from damaging racks and other assets. Easy to install and cost-effective, the guide is available in lengths up to 20' and made from durable 5" x 3" structural steel. Finished in safety yellow for high visibility, it's perfect for areas needing long, straight protection.
