

Scrap Choppers

FROMM specialize in designing and manufacturing cutting-edge systems tailored for diverse industries, including the wood product sector and scrap metal industry.

SWEED is at the forefront of designing material handling systems, offering advanced recycling and handling solutions tailored for industries like wood products and scrap metal

SWEED scrap choppers offer solutions to reduce a variety of scrap, everything from P.E.T. strapping, steel banding, baling wire, and bandsaw blades to fast-moving slitter trim and red-hot tube scarf.

No matter what industry you are in, maintaining workplace safety and efficiency in your facility, yard, or plant is very important. A brilliant way to maximize productivity and worker safety while simultaneously reducing costs and increasing revenue is by streamlining your scrap materials.

With Sweed's steel banding choppers, its quiet easy to handle and dispose off the unprocessed steel banding. The banding chopper processes the metal to a scrap so compact that the unprocessed contents of one 30-yard dump box can fit into two 55-gallon drums after chopping.

There are so many benefits to efficiency both on the line and off with Sweed steel banding choppers.
