

## Wall Travelling Jib Crane

### Reduce Downtime with Supporting Jib Cranes

Wall Traveling jib cranes are a profitable addition to the bridge crane bay. Although it offers less floor coverage than the bridge crane, the Wall Traveling jib crane provides the very same benefits plus more. They are used in production environments where many work stations are linked together in a straight line. Expensive idle time among machinery and personnel is eliminated by the Wall Travelling jib, which transports the product to the next station independently of the main bridge crane.

### Features

- Capacities up to 20,000lbs
- Outreach ranges up to 48ft
- Indoor applications only
- Lift and transport product through full length of the shop
- VFD (variable frequent drive) – controlled travel speeds
- Low headroom cantilever design

### Adjustable Steel Gantry Cranes

- Steel gantry cranes are durable, adjustable, and designed for moving materials efficiently. They come with locking swivel casters for easy mobility and precise positioning.

### Adjustable Height Aluminum Gantry Cranes

- Lightweight and corrosion-resistant, aluminum gantry cranes are perfect for outdoor use. They're easy to set up and adjust, making them versatile and portable.

### Full and Semi-Gantry Cranes

- Full gantry cranes offer high load capacity and flexibility, while semi-gantry cranes maximize workspace with one-sided support.

### Portable Gantry Cranes

- Portable gantry cranes provide an economical, mobile lifting solution. They are easy to assemble and move, ideal for light-duty tasks.
