# Introduction

Since 1973, Equipment World has been the trusted partner for innovative solutions across Northern Ontario. From Sales, Leasing, and Rentals to Parts, Service, and Training, we are your go-to resource for the Forestry, Mining, Industrial, Farming, Freight, and Material Handling industries. Our expertise also extends to turn-key Technical Construction Specialties for Commercial, Institutional, and Educational facilities, making us a versatile and reliable provider.

As Space Planning Consultants, we bring your vision to life with a seamless, solution-driven approach. From the first request for a quote to the final installation, we're with you every step of the way, ensuring your project is completed on time, on budget, and beyond expectations. Our technical consultations combine on-site visits, advanced computer-aided design, and expert layout planning, ensuring every detail is optimized for your unique needs.

Backed by a full-service team and comprehensive project management, we don't just deliver solutions—we deliver results that elevate your business. Trust Equipment World to provide efficiency, innovation, and expertise you can count on.

## Why Choose Equipment World?

Are you struggling to make the most of your storage space? Equipment World is here to help! Whether you are an individual looking to optimize your home garage storage or a company aiming to streamline your warehouse operations, we provide tailored solutions to meet your specific needs.

### Expertise Across All Industries

At Equipment World, we work with diverse industries—including retail, manufacturing, commercial, government, healthcare, and education—tailoring solutions to meet their unique storage needs.

### Personalized, Efficient Solutions

Our Space Utilization Surveys identify inefficiencies, recommend improvements, and design optimized layouts that integrate seamlessly with your current and future equipment. Whether you're repurposing existing assets or planning for new machinery, we ensure your storage system enhances productivity and operational flow.

### Comprehensive and Actionable Analysis

Through detailed assessments of your storage layout, shelving, and space usage, we provide clear, actionable insights. Our reports empower you to make informed decisions for maximizing efficiency and creating a functional, future-ready warehouse.

# Pallet Racking

Proudly  
Manufactured  
in Canada

Pallet racking is the backbone of modern warehouse storage systems, providing a structured and efficient way to store goods. It consists of upright frames, horizontal beams, and wire decking or wooden pallets to support inventory.

These racks are designed to maximize vertical space while allowing easy access to stored items. They come in various configurations such as selective, drive-in, and push-back, each tailored to different storage needs and space constraints.

The primary purpose of pallet racking is to optimize warehouse space utilization and streamline inventory management processes. By organizing goods on pallets and stacking them on racks, warehouses can reduce clutter, improve accessibility, and enhance inventory control.

Safety is paramount in pallet racking systems. Proper installation, regular inspections, and adherence to weight capacity guidelines are crucial to prevent accidents and injuries in the workplace.

In essence, pallet racking may lack the excitement of a grand tale, but its impact on warehouse operations is undeniable. It's the silent hero that keeps warehouses running smoothly, ensuring goods are stored efficiently and accessed with ease.

Pallet racking systems are designed using two basic components; pre-assembled welded end frames and rigid one-piece interlocking horizontal beams. Beams engage into frames on 3" increments and come standard with safety clips to prevent disengagement from frames. All racking systems are designed and manufactured in accordance with applicable regulations and specifications.

Standard frame sizes are available in 24" to 60" depths and up to 24' high. Special sizes are available and Equipment World can help to suit any customer requirement.

Beams are available in roll formed box, welded step and roll formed step styles. Beam capacities range from 1,000 lbs. to 12,000 lbs. per pair and are available in lengths ranging from 48" to 144". Box beams are typically used to store conventional pallets and work best using accessories such as safety bars or wire mesh decks. Step beams allow for drop in decks, shelves and many additional accessories designed for product stacking and hand pick applications. Custom sizes and heavier capacities are also available.

# Discover the Right Type of Pallet Racking for Your Warehouse.

### Single Selective

Items are stored on individual shelves, allowing easy access to any specific item without moving others. Multiple configurations available.

### Double Deep

A double deep racking layout involves back to back rows of 2 deep selective rack. Each pick slot now has a front and a back pallet.

### Very Narrow Aisle

Maximizes warehouse space by reducing aisle width, allowing for efficient access to goods using specialized narrow aisle forklifts.

### Knock Down

Can be easily disassembled and reassembled, typically used for temporary or flexible storage needs.

### Drive-In

Allows standard fork truck access into the face of the system allowing larger storage blocks which reduces the number of required aisles.

### Push Back

The pallets are loaded through an open aisle, one after the next. Each pallet pushes the previous one backward, using a subsequent pallet loading rail system.

### Carton Flow

The rack supports inclined rollers or wheels that allow cartons to glide from the back (loading) aisle to the front (picking) aisle. When the front carton is unloaded, the next automatically glides into picking position for increased picking efficiency.

### Pallet Flow

Uses gravity and wheels or rollers, to convey and accumulate pallets in a storage module. Depths can range from 2 to over 20 pallets deep, thereby giving you higher storage density than other forms of racking.

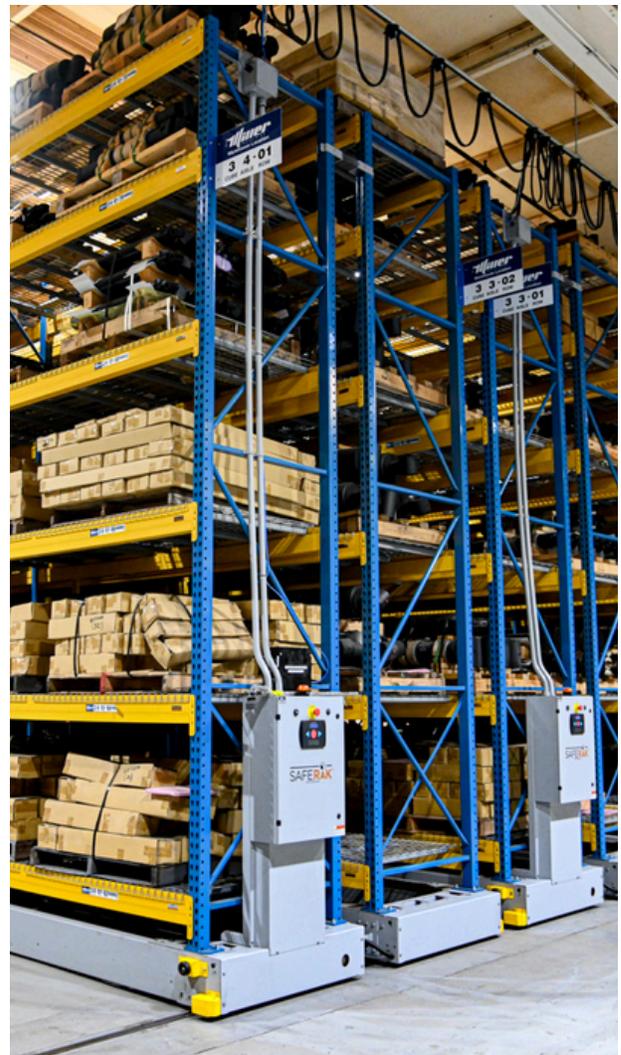

# Mobile Racking

Proudly  
Manufactured  
in Canada

Revamp your storage experience with our cutting-edge mobile racking systems, expertly crafted to enhance efficiency and adaptability. Our versatile solutions transform even the most cramped spaces into organized, productive environments, thanks to their innovative design that maximizes every inch of your available space. Customization is at the core of our systems, allowing you to configure adjustable shelving to accommodate documents, equipment, or inventory precisely as needed. Built to withstand heavy use and challenging conditions, our durable racking systems ensure long-lasting reliability. Choose from a variety of movement options—powered systems for effortless electric operation, mechanical systems for reliable and low-maintenance performance, or manual systems for a cost-effective, hands-on approach. Elevate your storage capabilities and optimize your space effortlessly with our mobile racking solutions.

# Explore the Benefits of Our Versatile Mobile Racking Solutions.

## Powered Mobile Racking Systems

Experience the pinnacle of convenience with our electric-powered racks. Designed for seamless, automated movement, these systems are perfect for environments requiring high-frequency access and utilization. They offer unparalleled efficiency, allowing for swift and effortless operation with minimal manual effort. Ideal for settings where convenience and productivity are paramount, these electric-powered racks integrate cutting-edge technology to ensure optimal performance and reliability.

## Mechanical Mobile Racking Systems

Our mechanical systems provide a reliable and durable solution through gear-driven movement combined with mechanical robustness. These systems are ideal for environments that demand a balance between durability and ease of use. They excel in providing a low-maintenance solution that withstands the test of time, making them perfect for applications where a sturdy and dependable system is essential. The mechanical design ensures consistent performance, reducing the need for frequent maintenance and offering a reliable option for various storage needs.

## Manual Mobile Racking Systems

For a budget-friendly and straightforward storage solution, our manual systems offer dependable performance through manual operation. These systems are ideal for environments where simplicity and cost-effectiveness are key considerations. Despite their simplicity, they are engineered for reliability, ensuring consistent and efficient operation. Perfect for settings where budget constraints are significant, these manual systems provide a practical and reliable option without compromising on quality.

# Roll-Out Racks

A roll-out rack is a specialized storage system designed to enhance access and organization within warehouses. Featuring trays or shelves that can be easily rolled out from the main structure, these racks streamline the loading and unloading of materials, reducing the need for forklifts to enter storage aisles and thereby improving safety and space efficiency. Ideal for storing heavy or bulky items such as metal sheets, tools, and molds, roll-out racks offer a versatile and durable solution for industrial storage needs. Engineered for heavy-duty applications and constructed from high-quality steel, they are well-suited for challenging environments, ensuring both longevity and reliable performance in warehouses and manufacturing facilities.

# Seamless Organization with our Roll-Out Rack Solutions.

**Honeycomb Rack**  
Gives you instant access and offers you the perfect solution for the storage of tubes, bars, flat bars and/or angles.

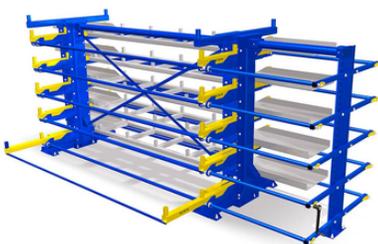

**Sheet Tower**  
Makes easy work of handling and storing sheets of raw material. They greatly facilitate the delivery by forklift of raw sheet material to laser, plasma, and water-jet cutting machines.

**Roll Out Vertical Sheet Rack**  
Designed for storage of smaller pieces, cut pieces, partial sheets, and leftovers from cutting and other operations.

**Roll Out Pallets**  
Responds to your reality by increasing execution speed while optimizing space and safety. Available in rack mounted or floor mounted options.

**Roll Out Cantilever Rack**  
With these racks, you will not only be able to free up to 50% of your floor space, but your employees will no longer have to find material by digging through dangerous piles.

**Roll Out Sheet Rack**  
Fed up with poorly stored material taking up too much floor space? It's true that un-optimized spacing with a lack of storage and handling equipment can considerably reduce efficiency, and more importantly, safety.

# Cantilever Racking

Cantilever racking is a versatile and efficient storage system designed to handle long, bulky, or irregularly shaped items. It features vertical columns with horizontal arms extending out to support the load, along with a stable base and bracing for added stability. Available in single-sided and double-sided configurations, cantilever racking offers flexibility with adjustable arms, easy accessibility due to its open design, and space efficiency by maximizing vertical storage space. It is ideal for storing lumber, metal rods, pipes, furniture, and building materials, making it a popular choice in industries like lumber yards and construction. When choosing cantilever racking, it's important to consider load capacity, available space, safety, and the material of the racking system to ensure it meets specific storage needs. Proper installation and maintenance are crucial for the safety and longevity of the racking system.

Proudly  
Manufactured  
in Canada

Our heavy-duty Cantilever racking systems are designed to store a wide variety of products with unrestricted front access for standard and oversized items.

### Single & Double Sided

Standard column heights range from 6' to 32' and Cantilever arms range from 18" to 72". Systems are capable of storing up to 100,000 lbs. per column. Custom designs are common and can be designed to meet your exact requirements.

### With Decking

This universal system can accommodate almost any type of product regardless of weight, length, depth or height; with the continuous unobstructed shelf level providing optimum storage efficiency.

### With Roof

This type of system provides all the benefits of a conventional cantilever racking system while protecting your product from rain, snow, ice and sun damage.

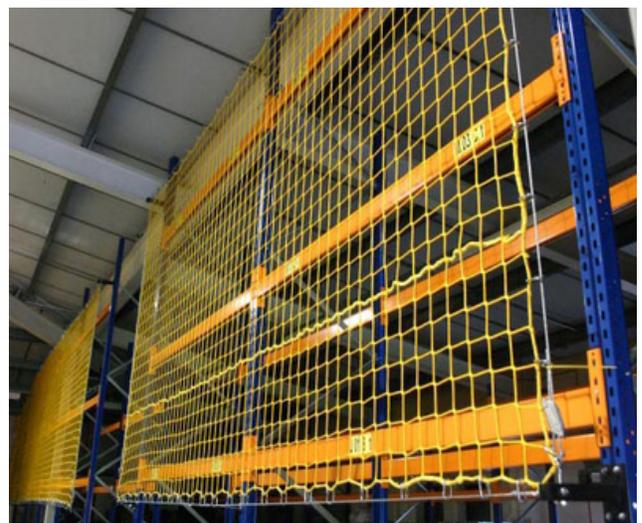

# Rack Protection & Safety

Proudly  
Manufactured  
in Canada

Safeguarding your storage systems is more crucial than ever, and our premium rack protection solutions are here to deliver just that. Imagine a shield that not only defends your racking investment from the rigors of everyday warehouse activity but also enhances the overall safety of your operation. Our cutting-edge protection systems are built for durability and reliability, offering peace of mind and ensuring your workflow remains uninterrupted. Partner with us to fortify your racking setup and keep your warehouse running smoothly and securely.

# Avoid Costly Downtime and Prevent Collision Damage.

### Rack Aisle Protectors

Effective protection close to the ground that shield sensitive rack-aisle-ends from warehouse traffic.

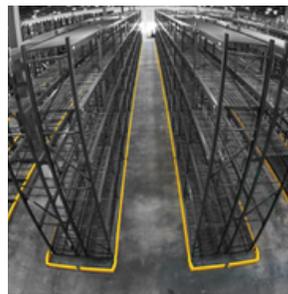

### Rack Post Protectors

Easy to install and economical; safeguard vulnerable racking uprights with rack post protectors.

### Wire Mesh Rack Guards

Rigid and resilient, these guards keep your inventory secure and your employees safe from falling debris.

### Floor Angle Guide

Strong and versatile; keeps traffic away from critical rack supports, pallet flow rails, walls, offices, storage partitions, and other work areas.

### Guardrails

We can offer any style of guard, guide rail system, post protector or frame protector to accommodate all needs and environments.

### Safety Clips

Used in all racking systems and is typically inserted in the face or side of the load beam connector to prevent unintentional uplifting or disengagement during use.

### Safety Netting

Engineered netting systems can be customized to meet any racking requirements and have been tested to ensure the highest level of safety and security is achieved.

### Security Fencing

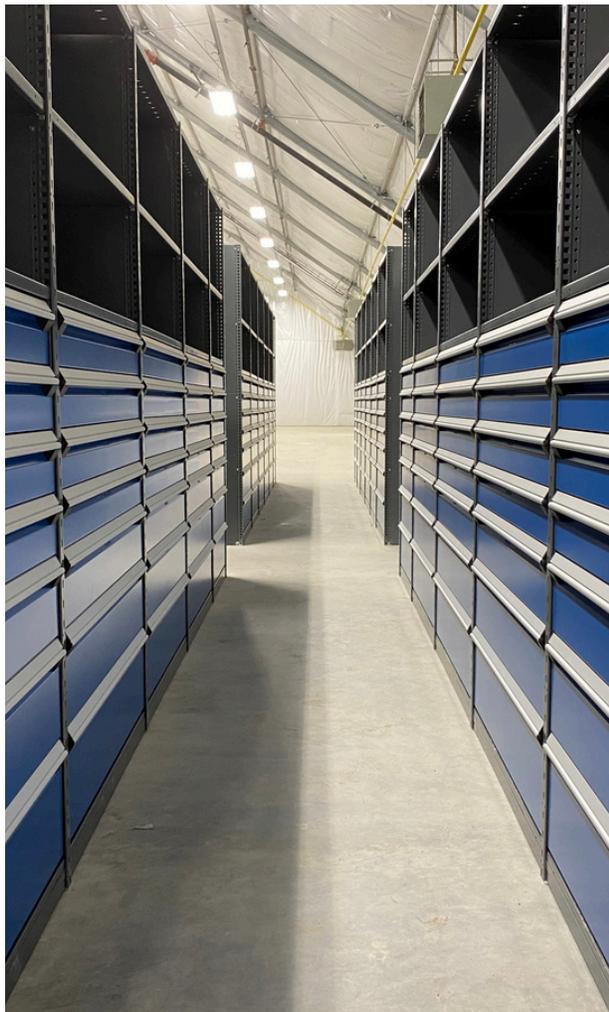

An economical bolt together enclosure can be tailored to suit virtually any customer requirement or configuration.

# Rousseau® Shelving

Rousseau® Shelving is engineered for the toughest environments, built to withstand heavy use without breaking a sweat. Installation is a breeze, and with a vast array of configurations and accessories, Rousseau® Shelving is your ultimate weapon against storage chaos. Whether you need robust shelving, mini-racking, versatile drawers, or expansive mezzanines, these complete systems have got you covered. Transform your workspace into a powerhouse of organization and productivity, all while choosing from a variety of vibrant colors to match your company's aesthetic. Elevate your storage game with Rousseau® Shelving—where strength, style, and efficiency converge.

# Flexible Solutions with Multiple Configurations and Accessories.

## Shelving With Drawers

Shelving with drawers is a hybrid system that can be used to store both small and large parts in the same unit. By installing this system, you can use up to one-sixth of the space used by traditional shelving solutions.

## Open Shelving & Mini-Racking

With a range of dimensions and options available, our industrial-quality open shelving and mini-racking units allow you to efficiently store bulky items in a scalable system that easily adapts to your specific needs.

## Closed Shelving

With a variety of configurations and organizational accessories available, our closed shelving is an ideal solution for creating an organized and easily modified storage space that will grow alongside your business.

## Mobile Shelving & Mini-Racking

Mobile storage allows you to complete your tasks quickly and effectively while keeping equipment close at hand.

# Simple Installation for Your Ultimate, Personalized Storage Solution.

## Multi-Level Shelving

Multilevel shelving is a customized and extremely practical solution for increasing storage capacity without increasing the amount of floor surface used.

## Record Storage

Our archiving and filing storage solutions offer truly maximized organization of files and folders to meet your specific requirements.

## Shelving With Sloped Shelves

Shelving with sloped shelves provides superior-quality gravity flow storage that integrates perfectly with other products in our Spider® range. This unique product on the market is available in a wide range of dimensions to fulfill your exact requirements.

## Shelving With Sliding Panels

Shelving with sliding utility panels is ideal for storing a wide range of items: tools, straps, cables, pipes, gaskets, etc.

# Mobile Shelving

Mobile shelving systems offer a versatile and efficient solution for maximizing storage capacity in any space. By utilizing movable shelving units that glide along tracks, these systems significantly increase storage density without the need for additional floor space. Ideal for a variety of settings—whether in offices, archives, libraries, or industrial environments—mobile shelving allows for easy access and organization of materials, helping to improve workflow and productivity. With customizable configurations, these systems can be tailored to fit the unique needs of any business, ensuring that every inch of space is put to optimal use.

## Optimize Your Workflow: The Universal Power of Mobile Shelving Systems.

### Healthcare and Pharmaceuticals

Efficiently organizes and secures medical supplies, patient records, and pharmaceuticals, allowing for easy access and better space management in healthcare facilities.

### Libraries, Archives, and Museums

Provides compact storage solutions for books, artifacts, and archival materials, preserving valuable collections while maximizing floor space.

### Retail and Hospitality

Optimizes inventory storage by allowing quick access to products and supplies, streamlining operations in back rooms and stock areas.

### Office and Corporate

Enhances the organization of files, documents, and office supplies, improving space utilization and keeping work environments clutter-free.

### Law Enforcement, Legal, and Military

Secures sensitive documents, evidence, and specialized equipment, ensuring easy retrieval while maintaining confidentiality and order.

### Manufacturing, Warehousing, and Logistics

Streamlines the storage of raw materials, tools, and finished products, improving workflow efficiency and maximizing available space in industrial settings.

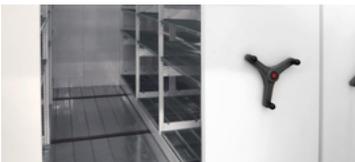

### Automotive and Construction

Efficiently stores and organizes tools, parts, and heavy equipment, keeping workspaces tidy and allowing for quick access to necessary items.

### Education and Research

Offers flexible storage for books, lab supplies, and research materials, adapting to the changing needs of educational institutions and research facilities.

### Agriculture and Food & Beverage

Manages the storage of seasonal tools, farming equipment, and food inventory, optimizing space and ensuring easy access during peak seasons.

### Telecommunications and Technology

Organizes and secures electronic components, tools, and data storage, maximizing space and maintaining order in high-tech environments.

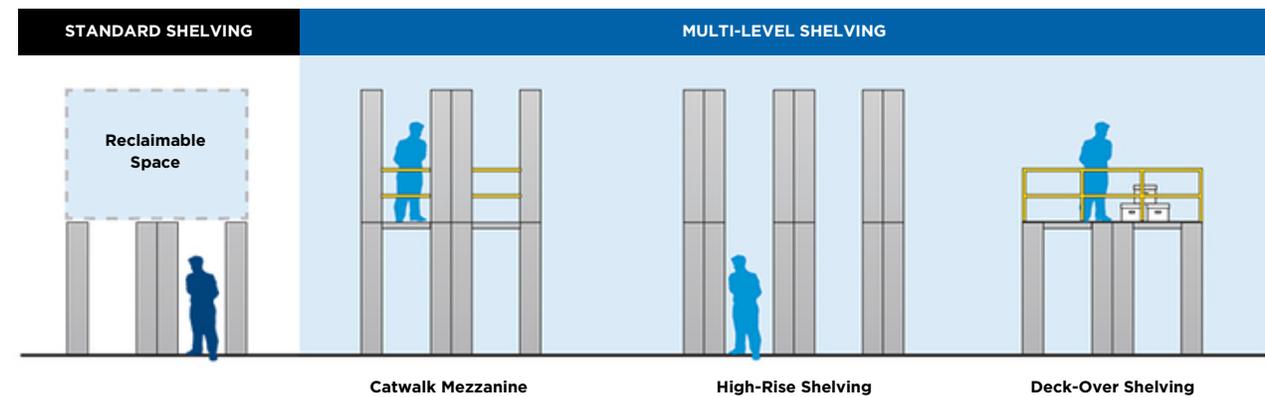

### Sports and Recreation

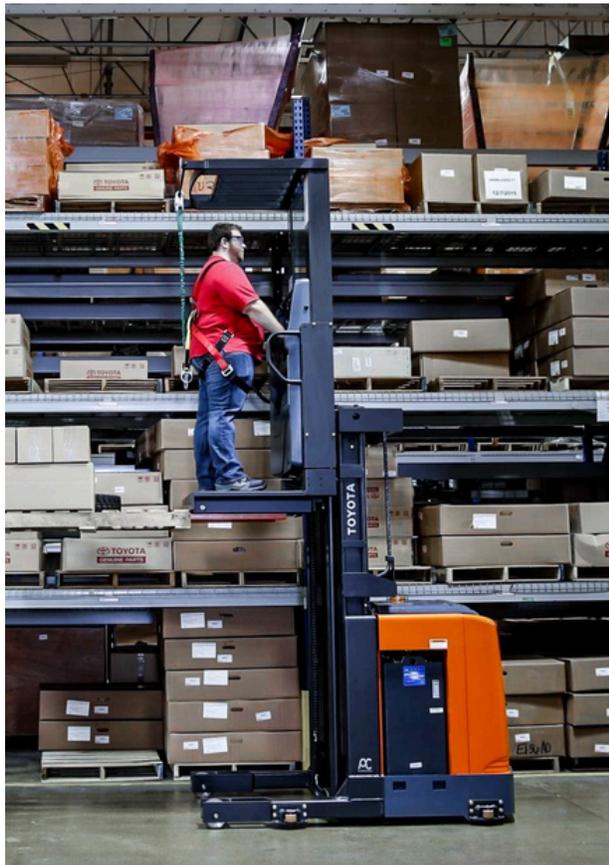

Stores sports equipment, uniforms, and training gear efficiently, ensuring quick access and easy organization for teams and facilities.

# High-Rise Shelving

Feeling cramped? Before you break out the blueprints for an addition, consider our multi-level shelving. It's the smart way to maximize the space you already have—in height, width, and depth. Our team of specialists is ready to tackle any challenge, finding creative solutions to navigate around construction support beams, columns, doors, ventilation conduits, and more. Multi-level shelving is your go-to answer for limited space. With the versatility of mini-racking, you can fully utilize your vertical space, as well as depth and width. For even more storage, combine our multi-level shelving with convenient drawers. Choose from various configurations: catwalk shelving, high-rise shelving, and deck-over-shelving. Our experts will work with you to determine the best option and define your storage needs. Let's turn your storage challenges into solutions!

## Stock Pickers

Stock Pickers maximize efficiency in high-rise shelving, enabling quick, safe retrieval of products at any height. With precise navigation and smooth lifting, they streamline inventory management, boost productivity, and enhance accuracy. By eliminating the need for ladders, they also promote a safer workspace.

**Equipment World can supply the right Stock Pickers to help you optimize operations and support your business growth.**

# Mezzanines

*Proudly  
Manufactured  
in Canada*

Unlock your facility's potential with mezzanines! These dynamic structures are your ticket to instantly doubling your floor space—perfect for expanding parts departments, offices, retail stores, and more. Imagine transforming your space swiftly, without the hassle of expensive renovations or relocations. Our industrial-strength mezzanines are custom-designed to blend seamlessly with your layout, tailored to your specific height, area, and load needs. Built for durability and versatility, they can handle heavy loads and serve a variety of purposes, from storage to extra office space. With mezzanines, space expansion isn't just a dream—it's a game-changing reality!

# Discover Endless Possibilities for Expansion with Our Mezzanines.

## Multi-Purpose Warehouse

Offer a cost-effective, flexible solution to space constraints in manufacturing and distribution centers, providing additional storage and operational efficiency without the expense of new construction.

## Parts Inventory

Creates space for shelving, computer stations, and equipment, improving inventory control, traffic circulation, item accessibility, and worker safety with a safety pivot gate.

## Equipment Platform

Enhances safety and efficiency by providing convenient access points and secure passageways above industrial machinery, reducing workplace hazards, and supporting maintenance and automated systems.

## In-Plant Office

Creates a dedicated office space above the production floor, enhancing administrative efficiency and allowing for additional uses like conference rooms or break areas, without disrupting ongoing operations.

## Online Distribution

Effectively doubles workspace, improving organization and efficiency for stocking, picking, and shipping, while supporting conveyor systems and increasing inventory capacity to meet customer demands for fast and reliable service.

## Training Facilities

Provide a controlled environment for simulating and practicing city infrastructure maintenance and emergency scenarios, ensuring workers are well-prepared for real-world challenges.

## Industrial Catwalk

Enhance industrial and manufacturing facility efficiency by providing safe, space-efficient walkways for equipment access and maintenance, while ensuring secure platforms and code-compliant staircases to minimize fall hazards.

## Conveyor Support

Engineered to integrate seamlessly with existing conveyor systems, providing robust support to handle high-volume product movement and reduce warehouse foot traffic and worker strain.

## Multi-Level

Installing a multi-level mezzanine maximizes warehouse space and provides a cost-effective storage solution, avoiding property tax increases and offering quicker depreciation compared to new construction.

### Retail Store

Adding a mezzanine level can double your sales floor space, enhance product visibility, and improve customer experience while avoiding the costs and disruptions of moving.

### Home Garage

Ideal for car enthusiasts needing climate-controlled storage, a mezzanine can transform the space into a personalized entertainment area, enhancing the overall lifestyle experience and social opportunities.

### Exhibition Platform

Advanced CNC technology enables the creation of flexible, minimalist mezzanines that adhere to museum guidelines and accessibility requirements, providing elegant solutions for elevated display and viewing spaces while ensuring inclusivity for all visitors.

### Self-Storage Facility

Maximize the potential of a self-storage building conversion with a freestanding mezzanine, which adds extra floors and flexibility, allowing for increased storage capacity and adaptability to meet changing community needs.

### Sports & Fitness

Enhance your fitness or sports center by adding a mezzanine to double your usable space, allowing for a wider range of equipment and activities, and setting yourself apart from the competition with minimal disruption to your operations.

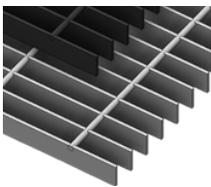

### Restaurant & Bar

Boost your restaurant or bar's revenue potential by installing a mezzanine to instantly double your usable floor space, allowing for more seating and optimizing your layout while complying with local fire codes and avoiding overcrowding.

---

## Flooring Options

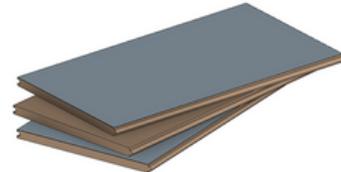

When you need a reliable mezzanine floor that won't buckle under pressure, we offer three options to cover almost any application:

**Bar Grating:** Durable, low-maintenance, and ideal for air, light, and water passage. Offers excellent drainage, optional traction surface, and corrosion-resistant finishes.

**Diamond Grip Steel Planking:** High strength-to-weight ratio with a sleek look. Anti-skid dimples prevent slips and allow easy rolling loads. Available in powder-coated grey finish.

**ResinDek®:** A sustainable, lightweight, and durable flooring option supporting pallet jack loads of 2,000 to 8,000 lbs. The composite wood construction absorbs impact, reducing fatigue and injuries.

*For more details on the types of flooring we offer, contact us today!*

# Material Lifts

Material lifts are essential for moving goods and materials vertically between floors, streamlining operations and maximizing storage efficiency across industries such as warehousing, manufacturing, and retail. These lifts are designed specifically for freight, reducing manual handling, saving time, and making better use of vertical storage space. Their robust and efficient design ensures reliability and safety, even in demanding environments.

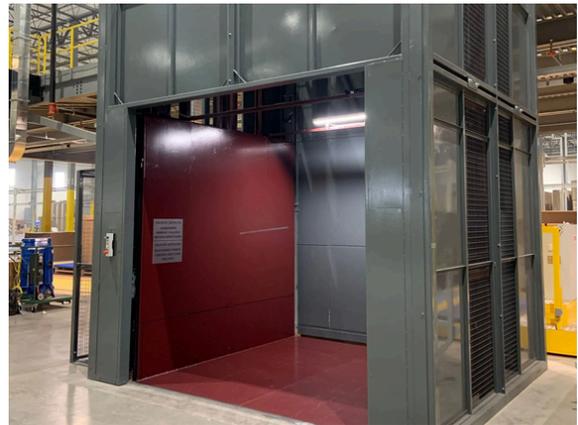

Equipment World provides tailored material lift solutions to suit diverse business needs. Whether for high-capacity storage facilities or compact retail spaces, these lifts enhance productivity, optimize workflows, and ensure compliance with safety standards, making them a valuable investment for any operation.

Unlike passenger elevators, material lifts are specifically engineered for the efficient movement of goods and products, making them the most cost-effective and straightforward solution for lifting loads.

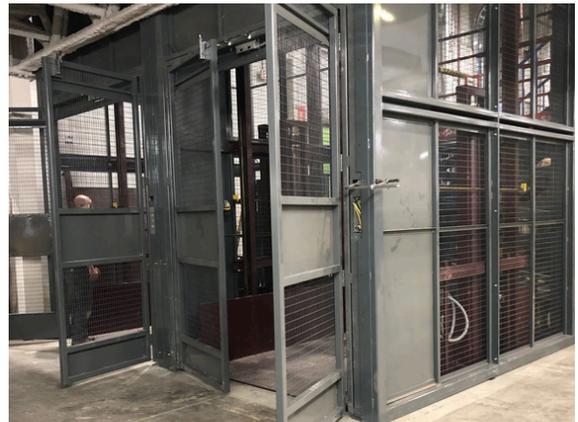

### **Type A Material Lifts**

Type A material lifts are efficient, versatile solutions for moving goods vertically. With automatic operation, unlimited speed, and height, they are controlled from hall stations and not designed for passengers. Doors, up to 4 feet wide, can be manual or powered. Ideal for businesses needing fast, reliable freight transport, they offer customizable capacities and configurations to suit various loads and spaces, enhancing workflow in industrial and commercial settings.

### **Type B Material Lifts**

Type B material lifts offer economical, reliable vertical transportation with constant-pressure push buttons for hands-on operation. They feature swing or sliding doors, a controlled speed of 30 feet per minute, and a maximum travel height of 25 feet. Ideal for warehouses, manufacturing, and retail, these versatile lifts handle various loads and can accommodate one material handler. Their simple, robust design ensures reliability, making them a cost-effective solution for limited vertical spaces.

# Tire Storage

Proudly  
Manufactured  
in Canada 

Our tire storage solutions with racking and shelving systems maximize space efficiency and flexibility, making them ideal for businesses looking to optimize storage. These high-density systems can double or triple storage capacity without expanding the footprint, accommodating a wide range of tire sizes with adjustable shelves. Designed with ergonomics in mind, they reduce the need for bending, lifting, and pulling, minimizing workplace injuries and enhancing workflow efficiency. Built with robust materials, they ensure long-term durability and safety. Customization options, including various sizes, colors, and configurations, allow businesses to tailor the systems to their specific needs. The modular design facilitates easy reconfiguration and expansion, adapting to changing storage requirements. During peak tire seasons, our systems efficiently manage increased inventory, ensuring quick access and organization. They can also be integrated into shipping containers for secure and efficient transport.

Investing in our tire racking and shelving systems supports business growth and offers a faster return on investment by optimizing space and improving safety. Proper storage conditions help maintain tire quality, extending tire life. The durable design requires minimal maintenance, providing a long-lasting, scalable solution for tire storage needs. These features make our systems the ideal choice for businesses seeking to enhance storage capabilities while ensuring safety and efficiency.

## Narrow Aisle Trucks

Equipment World supplies Narrow Aisle Trucks designed to optimize warehouse space by efficiently navigating tight environments. These trucks enhance productivity, maximize storage density, and improve safety with advanced features like cameras and sensors. Ideal for applications like tire storage, they facilitate vertical stacking and organized inventory management, reducing the need for extra warehouse space.

# Lockers

Proudly  
Manufactured  
in Canada

Discover our high-security lockers, meticulously crafted for military, law enforcement, government, and public institutions. Our lockers ensure unparalleled security and convenience, offering separate locking compartments, ventilated steel gates, and modular systems with customizable components.

We provide a diverse range of lockers, from traditional designs with louvered doors to specialized collections for high moisture resistance and superior strength. Our plastic lockers are rust-proof and maintenance-free, while phenolic lockers offer impact, water, and corrosion resistance. Our products cater to various needs, including standard lockers, cubbies, security boxes, and foot lockers, ensuring functionality and longevity.

From consultation to installation, our expert team ensures a hassle-free experience, prioritizing quality and customer satisfaction. Using only the highest quality materials and rigorous testing, our lockers reliably store weapons, personal belongings, and sensitive documents. Choose our high-security lockers for a solution that blends security, durability, and flexibility.

### Metal Lockers

We offer versatile metal lockers for every need. The Traditional Collection features durable, ventilated storage, while Traditional Plus adds concealed vents for extra toughness. The Competitor Collection maximizes ventilation with diamond-perforated doors, and the Pro Collection ensures secure, easy access to uniforms and equipment. Perfect for various settings!

### Plastic Lockers

Crafted from rust-proof, dent-resistant high-density polyethylene, these durable lockers excel in humid or corrosive settings. Available in various colors and configurations, they offer a versatile, low-maintenance storage solution. Their non-porous design ensures easy cleaning, ideal for schools, gyms, and pool areas.

### Phenolic Lockers

Made from durable, water-resistant phenolic material, these lockers resist impact and graffiti, making them perfect for high-traffic, high-moisture areas like gyms, pools, and healthcare facilities. Their sleek design and low maintenance offer both functionality and style.

# Secure, Moisture-Resistant, and Ultra-Durable: The Perfect Locker for Every Setting.

## Law Enforcement

Specializes in secure storage for weapons, gear, evidence, and ammunition with customizable, secure, and traceable solutions like Weapons E-Lockers and Tactical Lockers.

## Military

Provides robust storage for various firearms and gear, including carbines, rifles, uniforms, ammunition, boxes, and more. Designed for maximum durability and flexibility.

## Government

Offers secure storage for electronics, sensitive files, and procurement contracts, ensuring high security and easy accessibility for authorized personnel.

## Corridor Lockers

Designed for general use in public spaces such as schools and gyms, providing durable and secure storage for personal items.

## Locker Accessories

### Hood, Bases & Trims

Variety of locker hoods, bases and trims are available.

### Benches & Pedestals

Benches add welcome convenience and comfort to every locker room.

### Locker Locks

Built-in key, combination, padlocks, electronic and coin operated locks.

### Locker Trays

Available in a wide range of colors for new lockers or to extend the life of your existing lockers.

# Fabric Shelters

Proudly  
Manufactured  
in Canada 

At Equipment World, we specialize in providing high-quality fabric shelters designed for strength and security. Our fabric structures are engineered to withstand various environmental conditions, ensuring durability and long-term reliability. With a focus on both functionality and protection, these shelters are perfect for a wide range of applications, from agricultural and industrial use to recreational and storage needs.

As a trusted dealer, Equipment World offers a full range of services, including the supply and installation of these robust fabric shelters. Our team is dedicated to delivering top-notch solutions that meet the specific requirements of our clients, ensuring that every structure is installed with precision and care. Whether you're looking for a temporary storage solution or a permanent shelter, Equipment World has the expertise and products to support your needs.

Note:

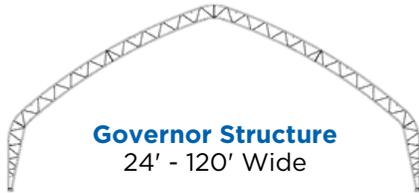

## Important Considerations For Your Fabric Shelter

**Permit Requirements:** Many customers are unaware that obtaining a permit for their fabric shelter may be necessary, depending on their local municipal regulations. Permits typically require an engineered truss-style structure, such as the "Governor" model. In contrast, non-engineered structures like the "Quick Build" with a single hoop tube design may not meet the criteria for permit approval. You can view the different model options on the next page.

**Foundation and Footing Requirements:** It is also important to consider the foundation and footing requirements for your fabric shelter. Engineered systems often need to be installed on a proper foundation, footings, or a concrete slab. Alternatively, some manufacturers offer a base rail system that can be anchored into other surfaces, such as asphalt.

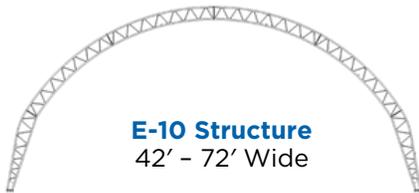

## Tailored to Fit: Explore Versatile Fabric Shelter Designs.

Provides a versatile solution for agriculture and commercial needs with a straight-leg frame for extra clearance and multiple side entry options. Available in various widths and two profiles to meet height requirements, these fabric buildings can be built to any length.

The Paramount building series was developed as a heavy snow load, trussed solution for the agriculture and heavy industrial sectors. Our High Profile Paramount utilizes a straight leg frame, which can maximize square footage and allow for side entry doors.

Designed to be an economical storage solution when you need a building and you need it now. The E-10 series is a collection of our most popular building widths. Ideal for low-occupancy, cold storage and livestock use. These structures have stood the test of time and have been repackaged for today's customer.

Offers maximum height clearance and interior space with a minimal footprint. Featuring a straight, extra-tall leg frame and multiple side entry options, it simplifies storage for large equipment and commodities. The engineered truss frame makes it ideal for townships and municipalities seeking efficient storage within city limits.

At Equipment World, we design custom buildings for any application. Our team works with you to ensure your needs are met. All structures are engineered, insurable, and meet local codes. We collaborate with engineers and permitting offices to provide top-notch support for projects, from commercial and agricultural to government and military.

A cost effective solution to suit your storage needs. The QuickBuild Dome has three frame designs, each offering their own unique benefits which can be customized to your requirements.

Available in four sizes, comes standard with a steel roll-up door and ships in a single crate. Perfect for vehicle, recreational vehicle, or equipment storage, it includes a ventilation kit and base rail for easy installation in just one day. Plus, it comes with a five-year warranty for added peace of mind.

## Establish the Foundation for Your Fabric Shelter.

### Shipping Containers

With many custom configurations and door options available, using shipping containers as your foundation, they can be used for extra storage and be stacked for additional height.

### Wooden Posts

Using wooden posts as a foundation offers an economical solution with quick installation, flexibility for various height adjustments, and the ability to accommodate custom wall claddings.

### Pre-Cast Concrete Blocks

A versatile foundation that allows for quick installation on compacted gravel or asphalt. They can be customized in design and size to meet specific aggregate or soil storage requirements.

### Sono Tubes

Using sono tubes as a foundation for a fabric shelter offers an economical solution with quick installation that can easily be adjusted to different heights.

### Base Rail System

A base rail system is a sturdy framework that anchors the structure to the ground, ensuring stability and durability in various conditions.

### Helical Piles

Helical piles offer a robust foundation solution for fabric shelters, providing high load capacities, corrosion resistance, and quick, clean installations with minimal excavation required.

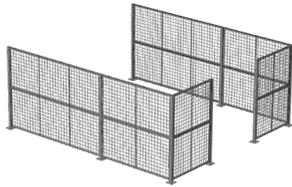

# Wire Mesh Partitions

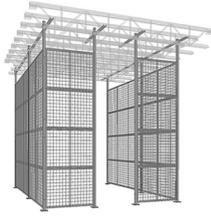

Industrial wire mesh partitions are more than just barriers; they're a smart investment for any warehouse looking to enhance security, safety, and organization. These partitions help create secure zones for valuable inventory, restricted areas for high-risk equipment, or designated spaces for employees and visitors, all while maintaining clear visibility. With their open design, they allow for air circulation and light penetration, minimizing the need for extra ventilation or lighting—an energy-efficient solution that doesn't compromise on safety. Easy to install and adapt to changing needs, they provide a flexible option for any warehouse layout. Whether it's about reducing accidents by keeping forklifts out of restricted areas or ensuring high-value items are protected, wire mesh partitions offer a simple yet effective way to maintain order. So, if you're aiming for a warehouse that's safer, more organized, and easier to manage, wire mesh partitions are the perfect fit.

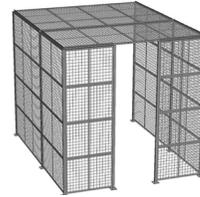

# The Components of Wire Mesh Partitions.

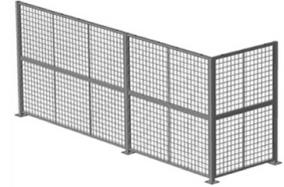

**Posts Freestanding**  
Posts are up to 24' high.

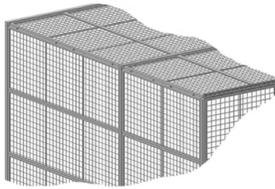

**Posts Top Fix**  
Posts are up to 48' high.

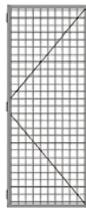

**Posts Freestanding With Roof**  
Posts are up to 42' high.

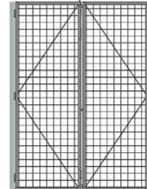

**Panels**  
Standard height sizes 1' to 5'.

# Security Shutters

Security shutters are a practical and effective solution for protecting commercial properties from potential break-ins and vandalism. Designed to provide a strong physical barrier, these shutters offer reliable security while maintaining a sleek, unobtrusive appearance. Whether for a retail store, office, or warehouse, they provide an extra layer of protection that blends seamlessly with your property's aesthetics. Easy to operate and built to last, security shutters not only enhance safety but also add peace of mind, allowing you to focus on what matters most—running your business.

## Folding & Rolling Security Closures of Superior Design.

### Folding Security Shutters

Designed for high-security applications and versatile use. They feature interlocking panels that fold compactly, allowing for wide openings while providing robust security. The shutters are durable, made from materials like aluminum or steel, and offer both manual and automated operation. They are ideal for securing entrances, storefronts, and other vulnerable areas.

### Rolling Security Shutters

Offer high protection with a compact roll-up design. Made from sturdy materials like aluminum or steel, they are ideal for securing large openings and provide options for manual or motorized operation. They are commonly used for storefronts and industrial settings.

### Counter Rolling Security Shutters

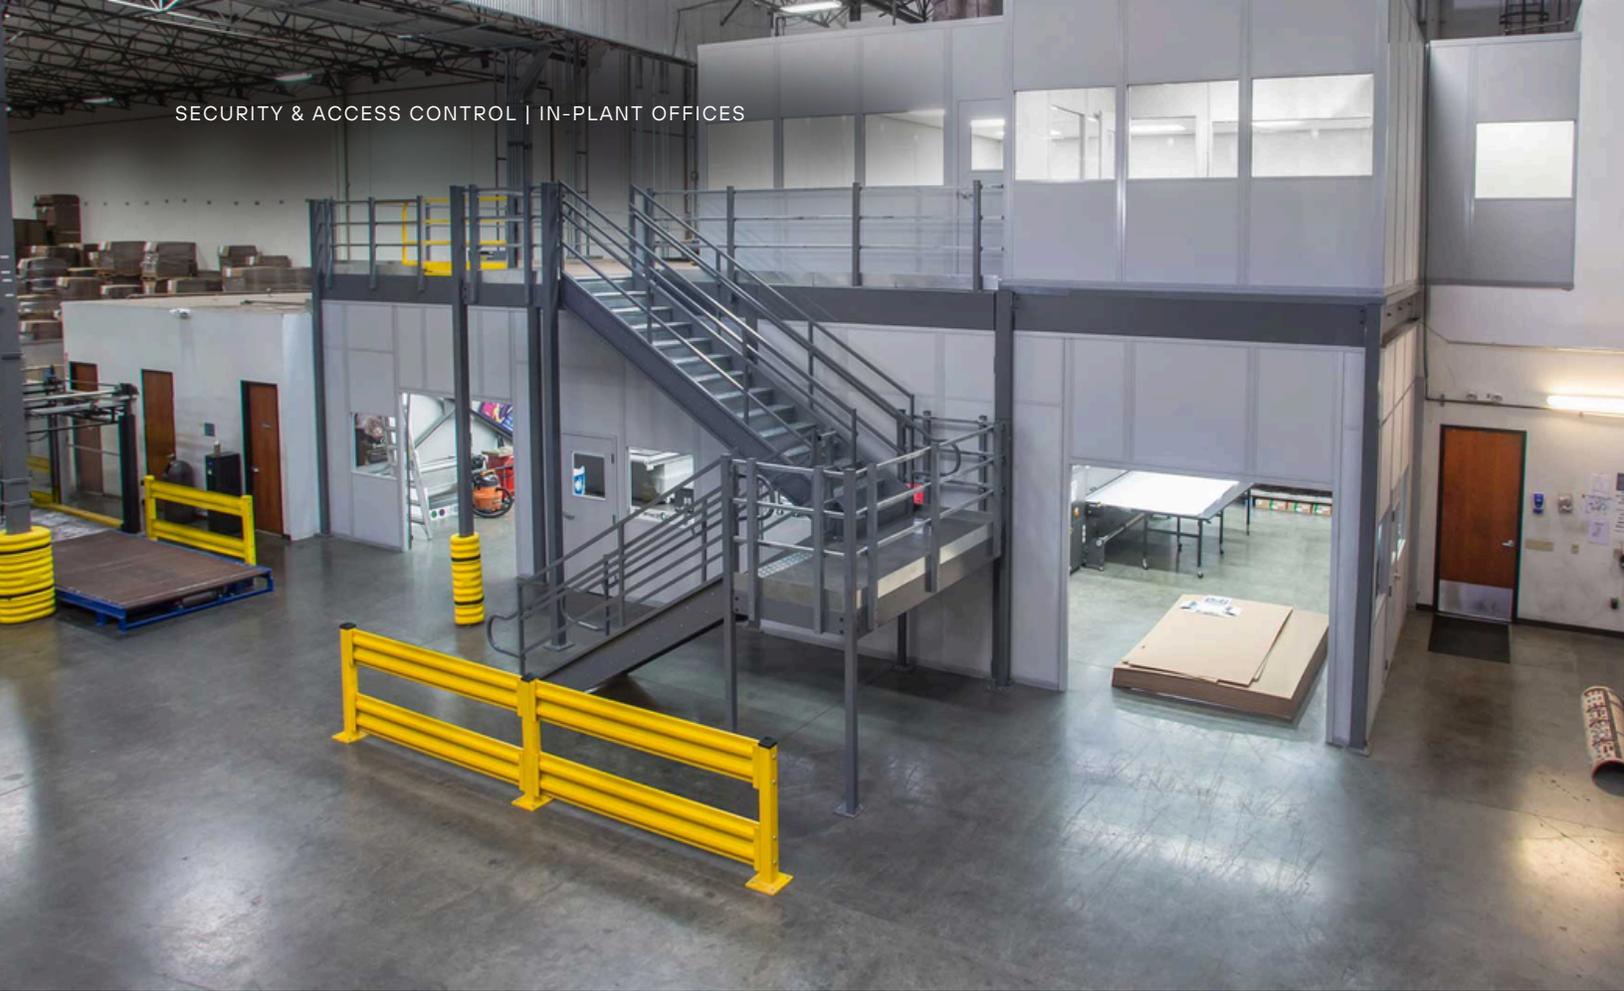

These shutters are designed for smaller openings such as counters and service windows. They roll up neatly into a compact housing, providing security and convenience for retail and commercial environments. Made from durable materials, they offer both manual and motorized operation.

## For Heavy-Duty Outdoor/Indoor Protection.

### DefendaGuard Security Shutters

Designed for commercial properties needing enhanced security and protection. They feature heavy-duty construction and are available in various styles to fit different applications. These shutters provide high levels of security, durability, and aesthetic flexibility, making them suitable for safeguarding storefronts, warehouses, and other commercial spaces.

# In-Plant Offices

Proudly  
Manufactured  
in Canada

In-Plant Offices provide a practical solution for creating dedicated spaces within an industrial or warehouse environment. These modular structures are designed to be quickly assembled, offering a flexible and cost-effective alternative to traditional construction. Ideal for offices, break rooms, training areas, or inspection rooms, In-Plant Offices are customizable to fit specific needs, including soundproofing, HVAC systems, and electrical setups. They provide a comfortable, secure space right on the factory floor, enhancing productivity by bringing management and administrative functions closer to operations. With minimal disruption to the existing facility, these offices are a smart investment for any growing business.
