

Room Divider Curtains

Industrial room divider curtains are versatile, durable solutions designed to optimize and manage space in industrial and commercial environments. Constructed from heavy-duty materials like vinyl or PVC, these curtains withstand harsh conditions, including high-traffic and rough handling. They offer flexibility in size and configuration, making them easy to install and adjust to changing needs. Additionally, they help maintain temperature zones, reduce energy costs, and provide noise reduction, enhancing overall environmental control and efficiency within the workspace.

Benefits

Dust containment

If sanding, grinding, mixing or other processes in your facility generate dust, powder or fine particulates, fabric curtain walls can help you contain the mess.

- Keep dust off products and packaging, and out of machinery and production equipment.
- Isolate individual work bays to contain sanding dust and paint overspray.
- Protect worker health by preventing inhalation of airborne dust.
- Prevent the spread of contaminants into adjacent areas.

Odor

Zoneworks wall systems can be used for industrial odor control in any type of industrial plant or commercial facility. Protect employee health and comfort, or prevent absorption of food or chemical odors into other products.
